

Restaurant Online Ordering Checklist:

- Restaurant info
 - Name
 - Number
 - Address
 - Times open
 - Any social media links you have
- Menu (in word doc or spreadsheet)
 - Price
 - Item description (if you have one)
 - Images (if you have, if not, I will simply use stock images)
 - Any other relevant info you think is needed
- Payment processor
 - To keep this process simple and moving along fast, orders will go through PayPal. If you don't have PayPal account already, make one and all I need is the email associated with account. All payments go directly to you in your account.
 - Due to large amount of request and the amount of time I'm putting in this, PayPal will be the only form I will be setting up at the moment. If later on you would like to change, that is fine.
- Logo
 - High resolution logo file if you have one. Preferably in a PNG file format. If you aren't sure what you have, just send over and I will help you.
- Current website
 - If you have a current website and need ordering function added, I will need to know domain and login info
 - If you don't have a website but have a domain, I will need access to that account
 - If you have none of the above mentioned, no problem, I have domains that I can use for your restaurant.

This will be a simple landing page with your branding, your own payment portal, menu and online ordering functionality. There is no charge for this service. I know how hard it is to run a business without all these hurdles the service industry is currently going through. I hope this helps your business and staff. If you have any questions, feel free to ask.
